

## How to Add Subtitles in VideoStudio

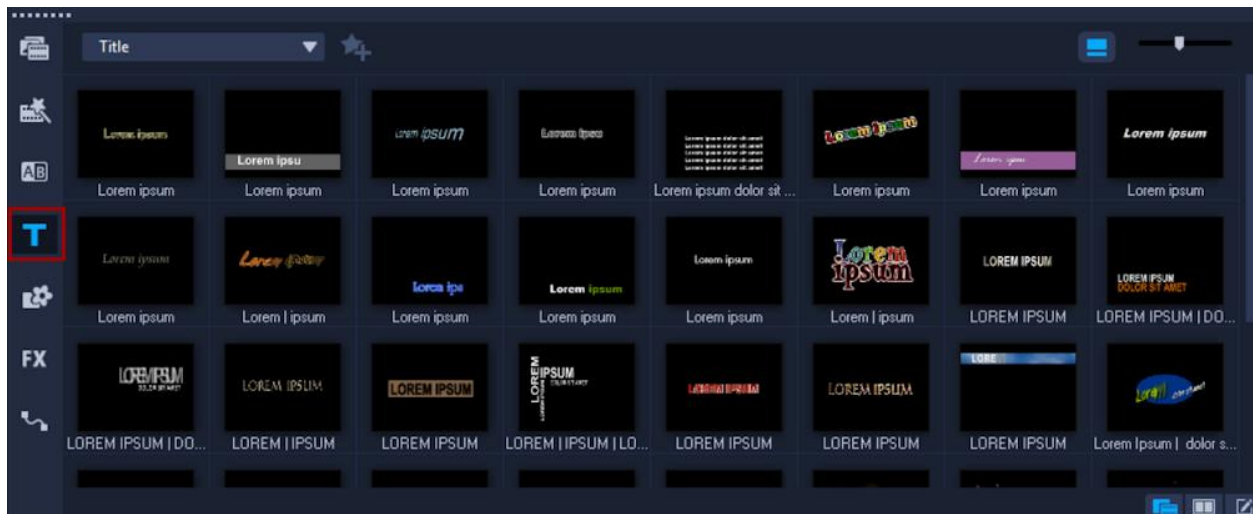

Adding subtitles to your video is a great way to make your video easier to follow and can be useful when wanting to create subtitles in multiple languages.

There are two ways to create subtitles using Corel's VideoStudio:

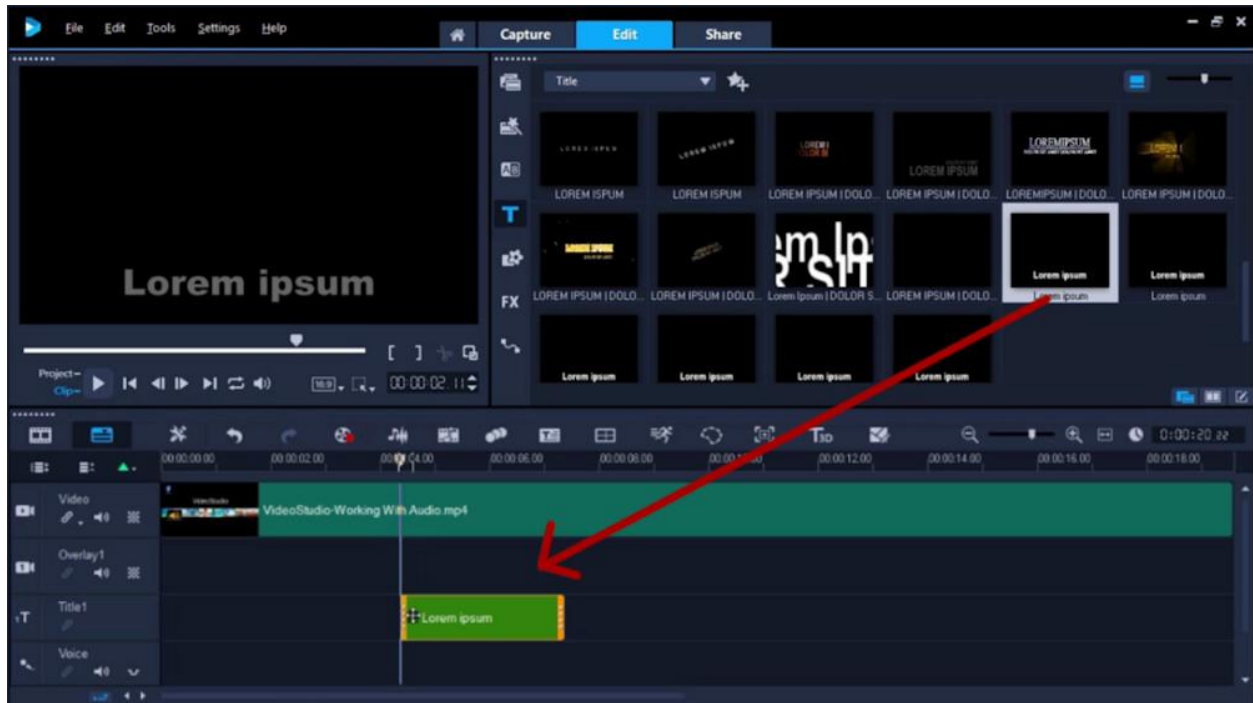

- Create subtitles manually using the **Title Tab**
- Create subtitles automatically using the **Subtitle Editor**

### Creating Subtitles Manually

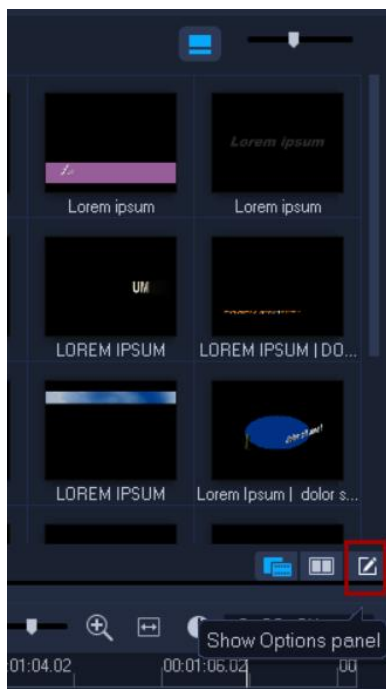

1. Add the video you want to subtitle to your timeline.
2. Click on the **Title Tab** and select a title style.

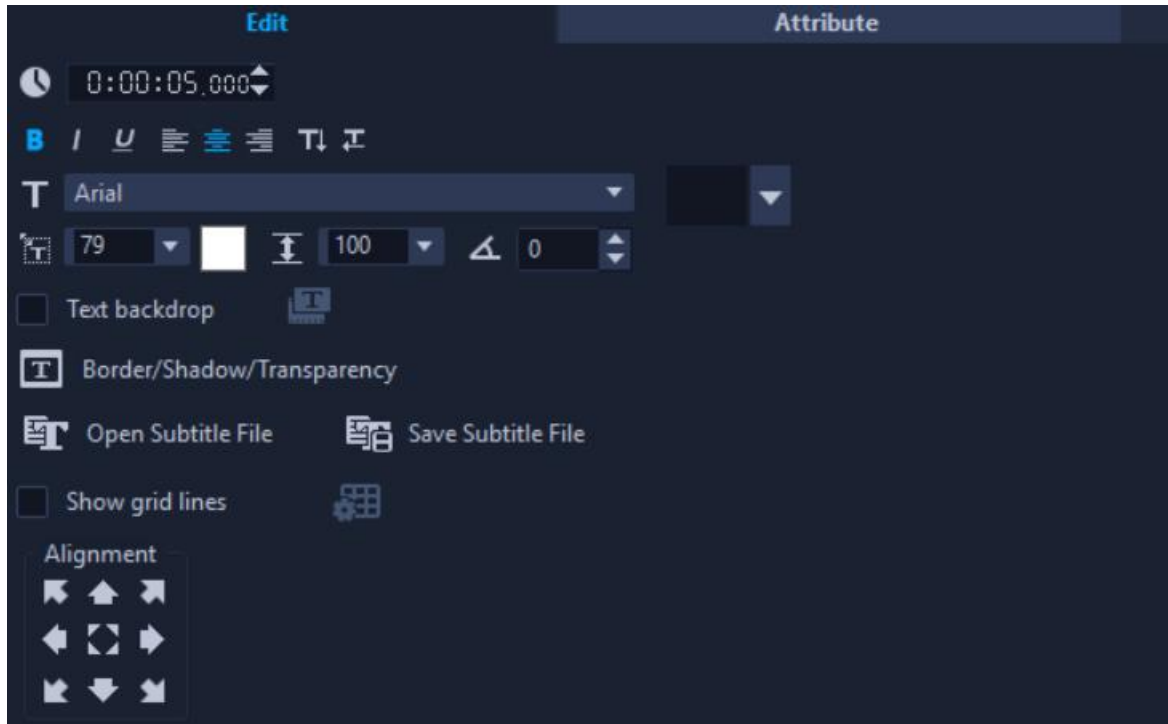

3. Drag the title style onto the title track of your timeline, then drag and position it to your desired location on the timeline.

4. Click on the **Show Options Panel** or double click on the text on the timeline to bring up the title editor.

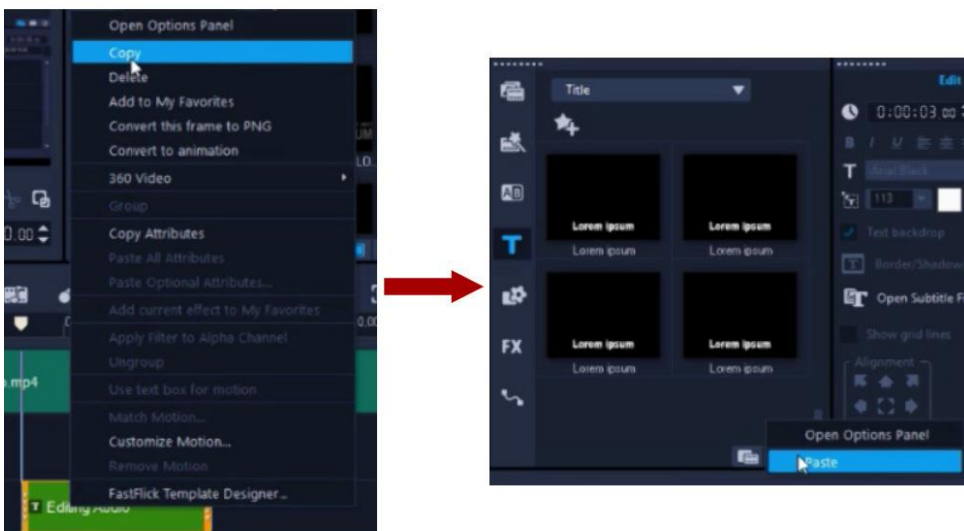

5. Customize your subtitles by changing the font type, size and color or add a colored text backdrop or shadow.

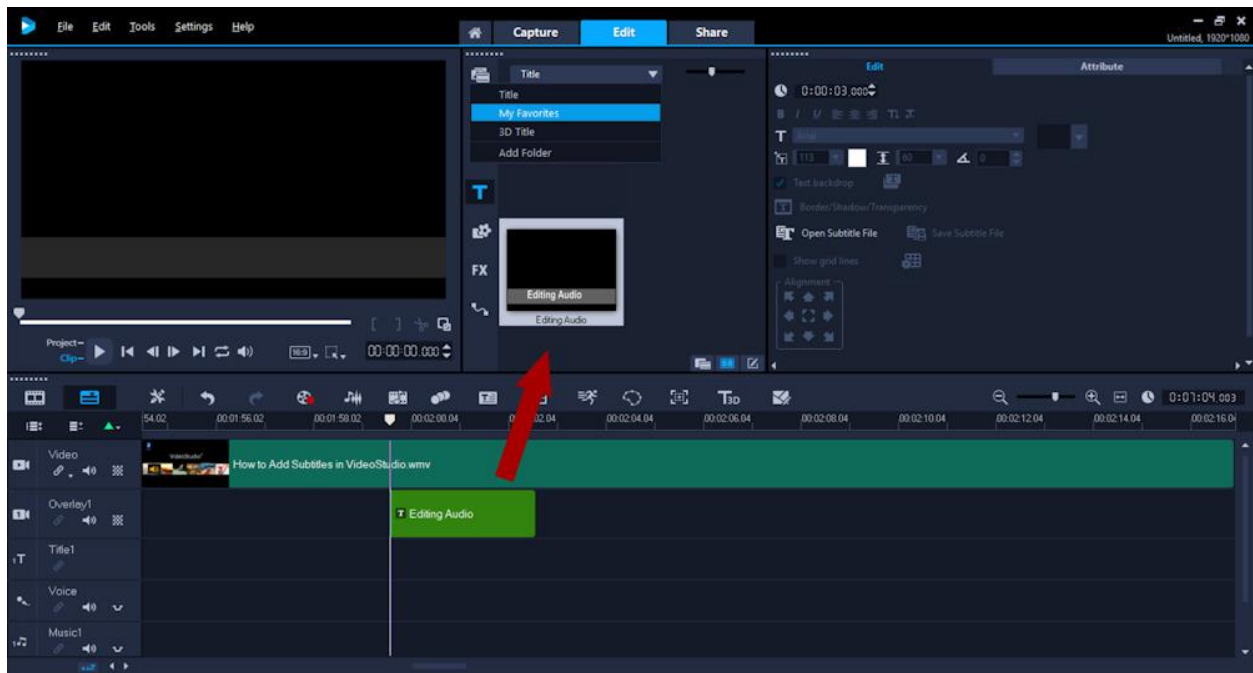

Select where you'd like to place the subtitles by clicking one of the alignment icons, or drag the text on the preview pane to your desired placement.

To use the same subtitle properties in other areas of your video, you may do the following:

- Right click on the title on your timeline and select **Copy**.
- Click **Paste** into the **Library Panel**.

Or from the **Gallery dropdown**, select **My Favorites** and drag the title in here.

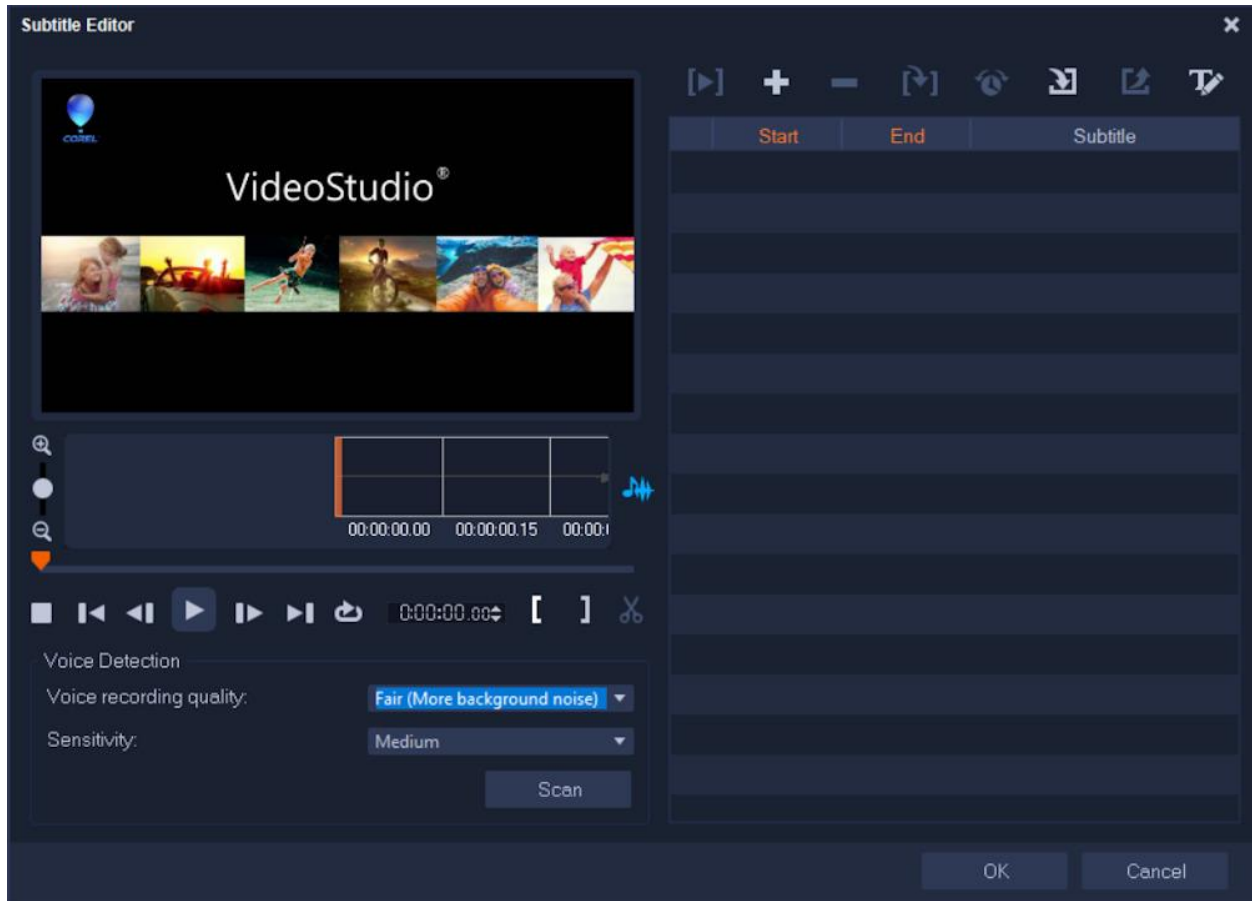

Now you can drag and drop the saved template onto the title track of your timeline to use in other areas of your video.

### Creating Subtitles Using the Subtitle Editor

1. Add the video you want to subtitle to your timeline.
2. Click on the **Subtitle Editor** icon.

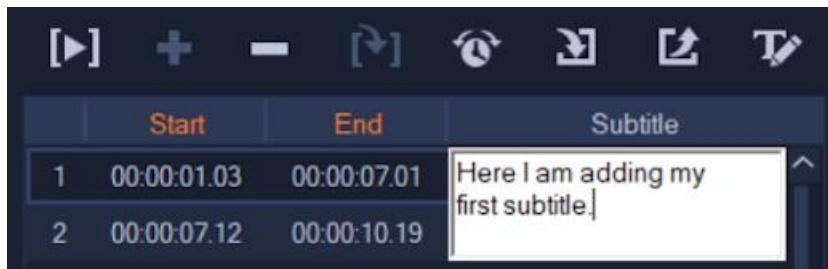

3. Under the **Voice Detection** section, select the quality of the voice within your clip.
  - a. **Best** for near-perfect audio quality or **Fair** or **Good** if there is other background noise in the video.
  - b. Change the sensitivity level to help the scanner detect the voice.
4. Click **Scan**.

5. Click **Play** on the preview pane on the left.
  - a. The orange boxes reflect where there is voice present in the clip and also where the subtitles will be placed.
  - b. Make adjustments to the length of the subtitles by dragging the edge of the orange box on the preview pane.
6. To begin subtitling, click on the **Play** button or click **Shift + Space** to play the selected subtitle segment.

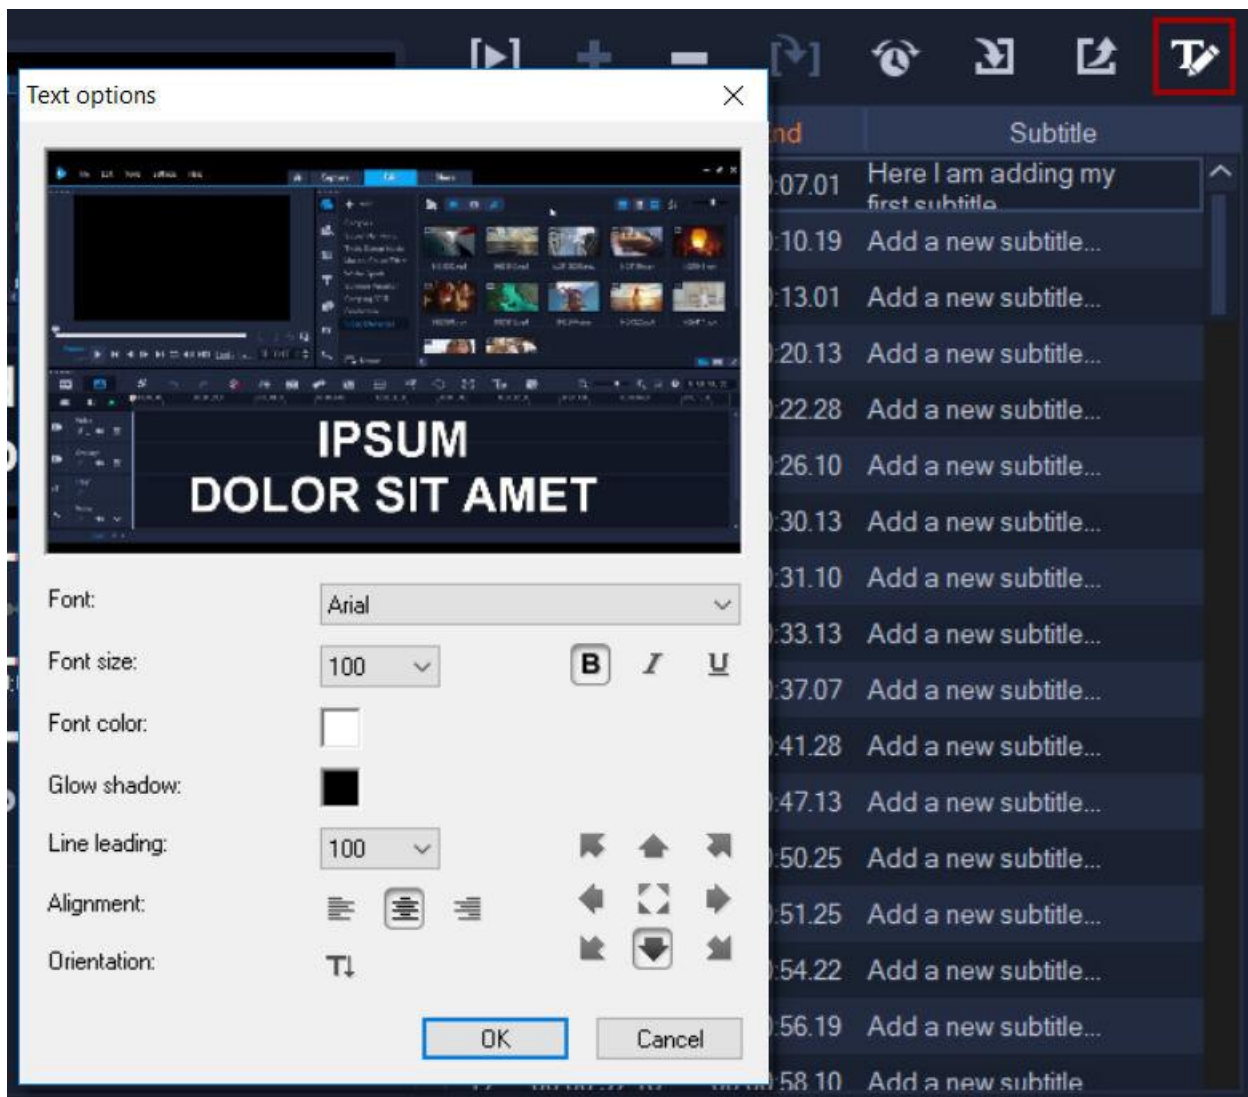

7. Click on **Add a New Subtitle** and type in your subtitle for that segment.

8. Continue doing this for all your segments.

9. Click on the **Text Options** icon and change the font size, color and other options for all of your subtitles.

10. Click **OK**, then **OK** again to add your subtitles to the timeline.

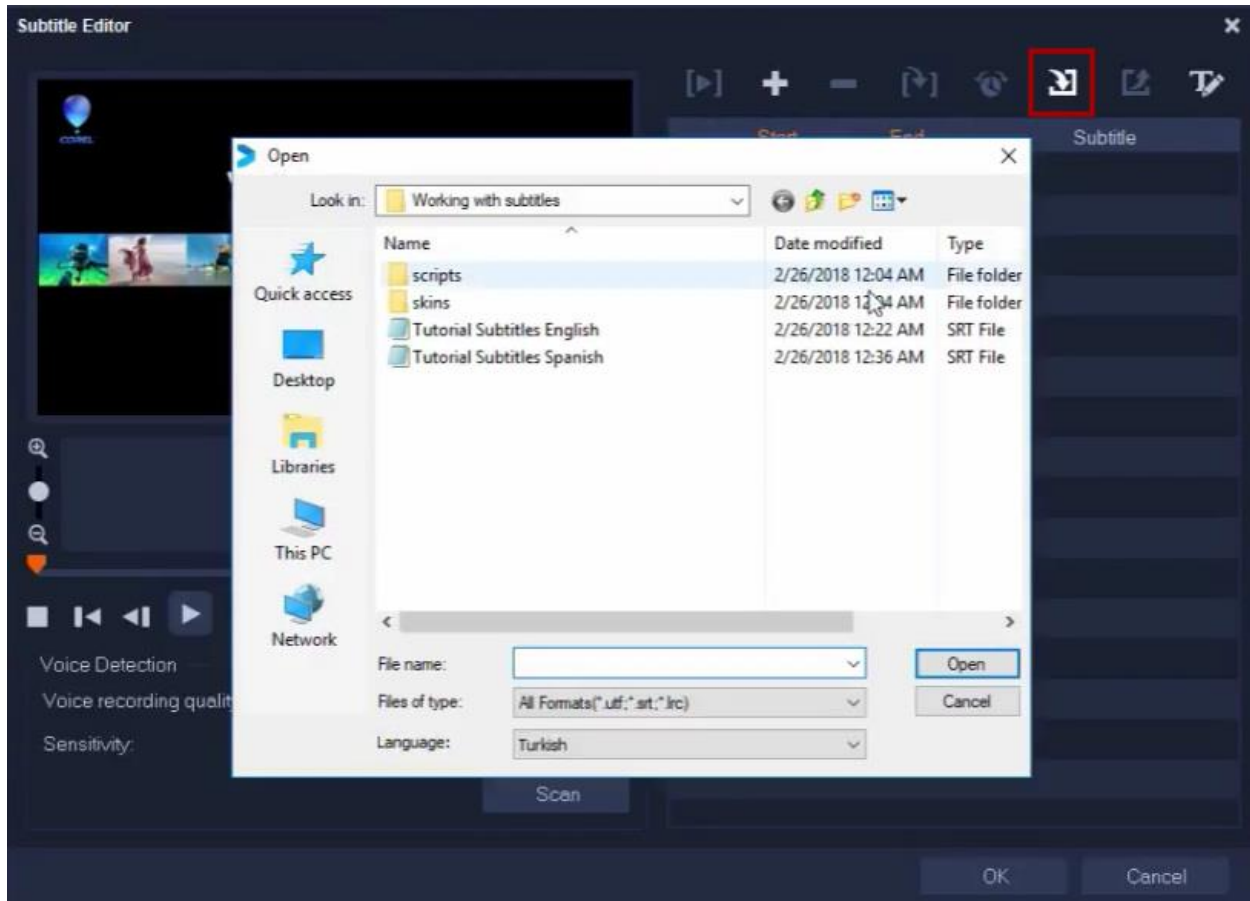

## Exporting and Importing Subtitles

1. Click on **Export Subtitle File**, and name and save your file.

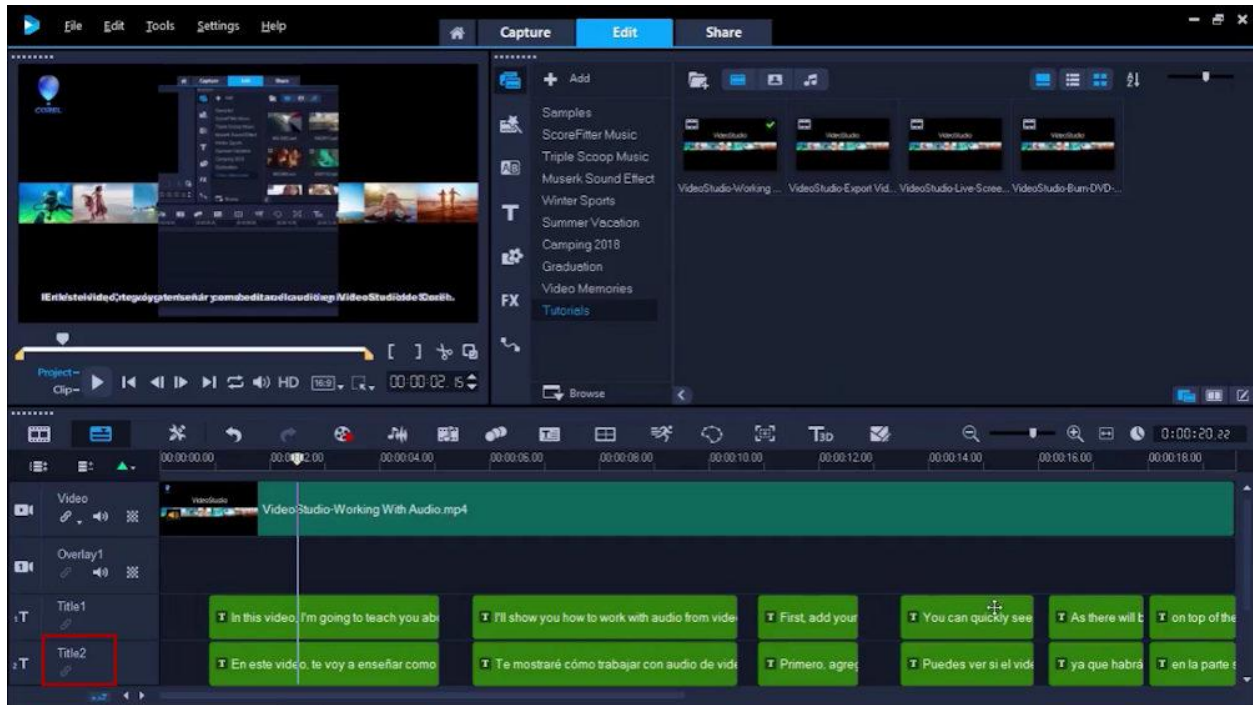

- To make edits to your .srt file, open your exported .srt file in Notepad.
- Edit the subtitles accordingly or you may translate these into another language.
- Save your file as another .srt file.

2. In VideoStudio, select **Import Subtitle File** to import your newly translated .srt file.

3. Click **OK** to add the subtitles to your timeline.
  - a. You'll see that they have now all been added to **Title Track 2**.

- b. You can either delete the titles in track one or hide the track by clicking the **Disable Title Track** icon.
4. Press **Play** to preview the subtitles on your video.
  - a. To make adjustments, drag the text on the timeline or double click on the textbox to make any edits in the **Options Panel**.
5. Export your newly subtitled video!
