

## How to Ripple Edit

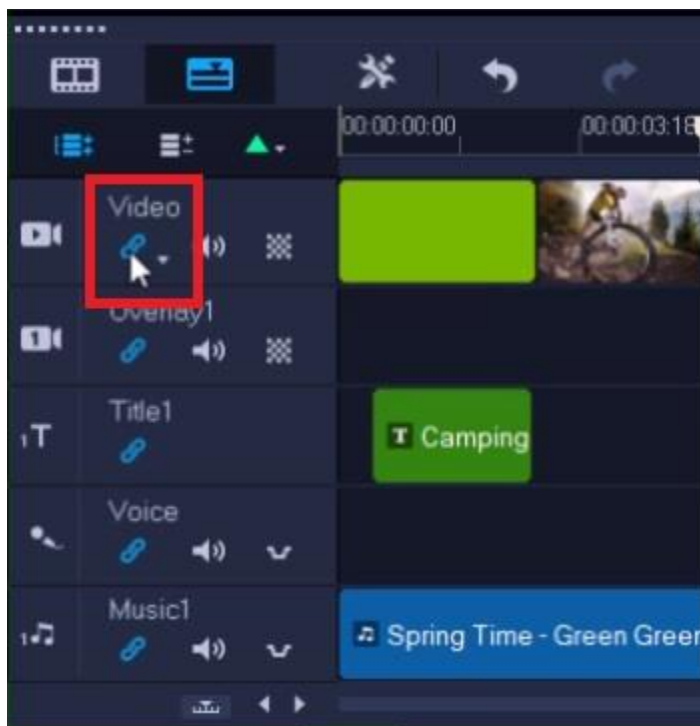

With VideoStudio, you can enable **Ripple Editing** to help you save time and effort when editing your video or slideshow! Imagine you have just created a slideshow and want to remove a few pictures. Doing this without Ripple Editing would throw off the timing of the rest of your video, and you would have to make manual adjustments to fix it. But if you enable Ripple Editing, your titles, overlays, and audio will stay in sync, even if you edit out a portion of the video.

In this tutorial, you will learn:

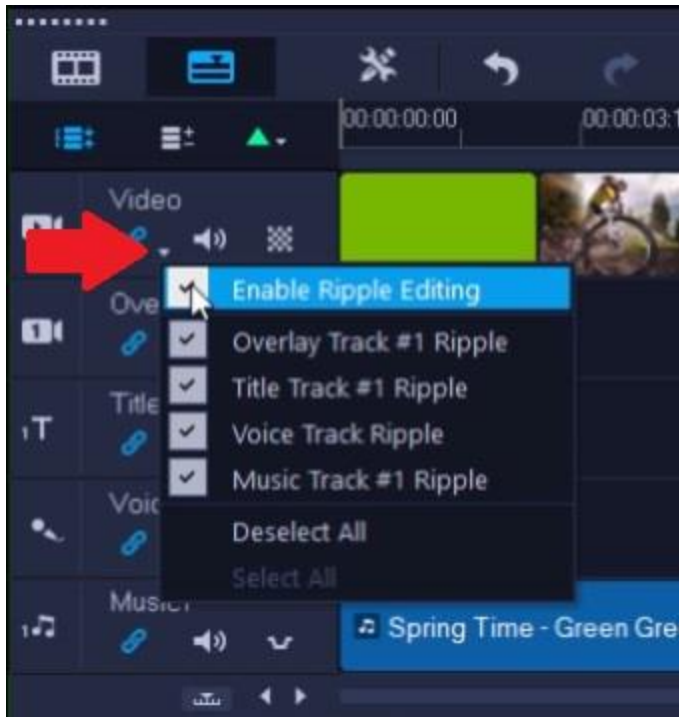

- How to lock individual tracks
- How to enable **Ripple Editing**

### To Enable Ripple Editing:

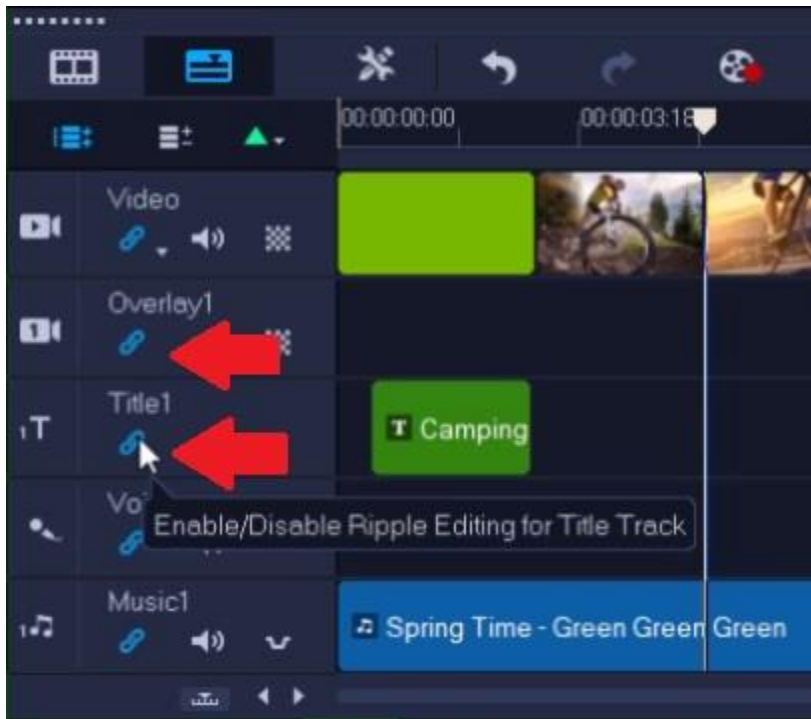

- Go to the left side of the video track on your **Timeline**.
- Click on the **chain lock icon**.
  - This will enable Ripple Editing on all the tracks on your Timeline.

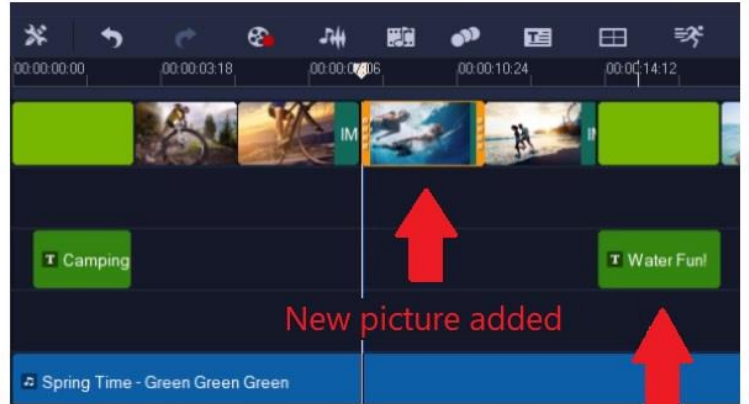

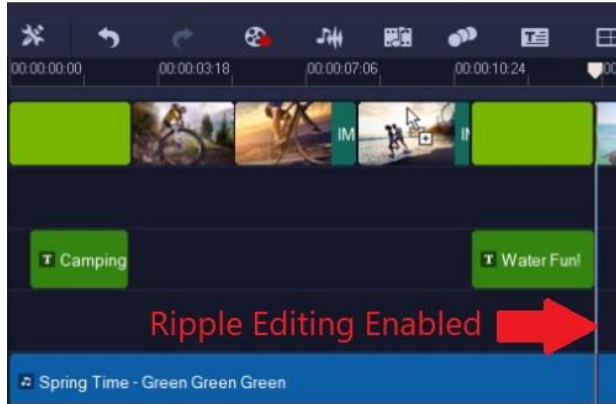

- Alternatively, click on the **small arrow** beside the chain lock icon and a **drop-down menu** will appear.

- Here, you can choose to **Enable Ripple Editing**, and select which tracks you would like to enable or disable Ripple Editing on.
- Click on the **chain lock icon** on each track to manually enable or disable Ripple Editing.

Now, you can make edits to your video or slideshow, and the titles, overlays, or audio will automatically move and stay in sync with the video.

Titles Stay Synced

As you can see, you won't have to make any manual adjustments!

Ripple Editing can save you a lot of time and effort and makes it easy to make edits to your video.
