

Using Scripts in PaintShop Pro

The simple instructions below will show you how to install and use the script you have purchased. You can also watch our video tutorial [How to Use Scripts](#) to see just how easy it is to work with scripts, and how they can magically transform your photos!

After downloading a script you have purchased from the Discovery Center store, you will need to store it in the proper location. Although you can save and run scripts from any folders on your computer, the best way is to use the script toolbar in PaintShop Pro. When you save the script files in the proper folders they will be displayed in the Script toolbar, making it very easy to find and use them.

Use the following location to save the script(s) you have downloaded:

C:\Users\YOURNAME\Documents\Corel PaintShop Pro\19.0\Scripts-Restricted

If you are using an earlier version of PaintShop Pro, replace 19.0 in the filepath above with your version.

To display the Script toolbar:

Chose **View > Toolbars > Script**

This is what the script toolbar looks like:

To run a script

- On the **Script** toolbar, click the **Select Script** drop-down list to display the scripts
- Select the script that you want to use
- Click the **Run Selected Script** button  to run the script

Then simply sit back and watch the magic take place on your screen!
