

In this tutorial, we'll explore the **Learn** inspector in CorelDRAW and Corel PHOTO-PAINT, and demonstrate how customizing your profile can help you access relevant practice files, to get you up to speed in the features most helpful for your work.

Note that most of the features described in this video are relevant only for CorelDRAW Graphics Suite subscribers. All users have access to the **Learn** inspector, but for non-subscribers, this inspector will contain only the **Hints** tab.

If you're a CorelDRAW Graphics Suite subscriber, when you first open CorelDRAW or PHOTO-PAINT, you'll be presented with the **Personalization** window. This is where you can tell us your experience level, and the types of projects you work on most often.

CorelDRAW

What projects do you work on most often?

Choose as many as apply:

Advertisements Art and Illustration Branding Printing and Production

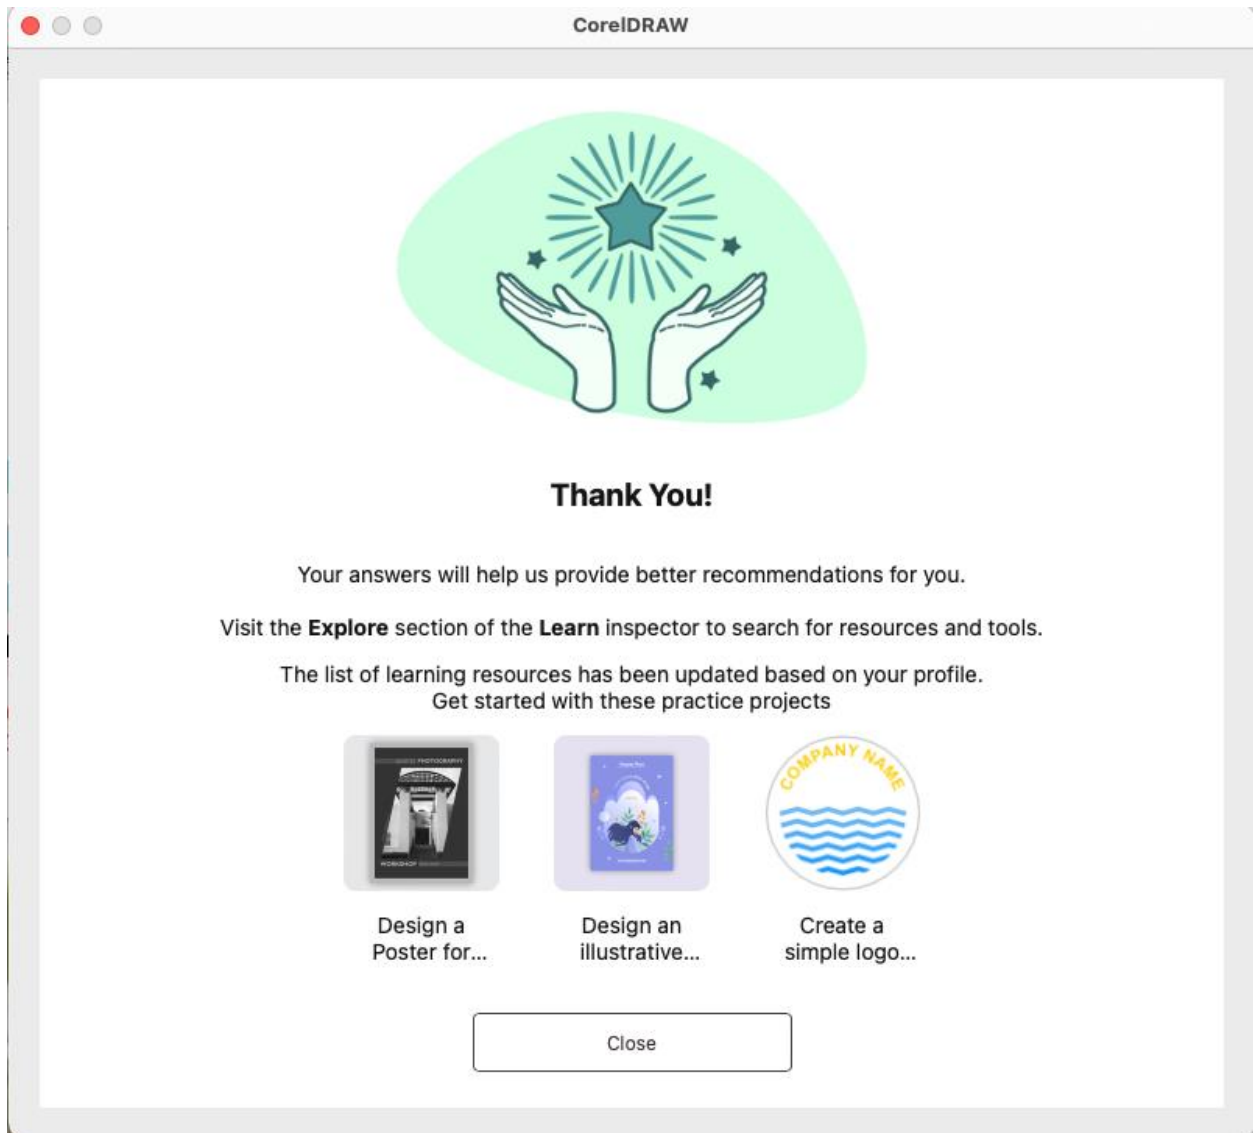

Fashion and Textiles **Infographics** Multipage Layout **Packaging**

Social Media Signage **Technical Drawings** Typography Web

Previous ○ ● Next

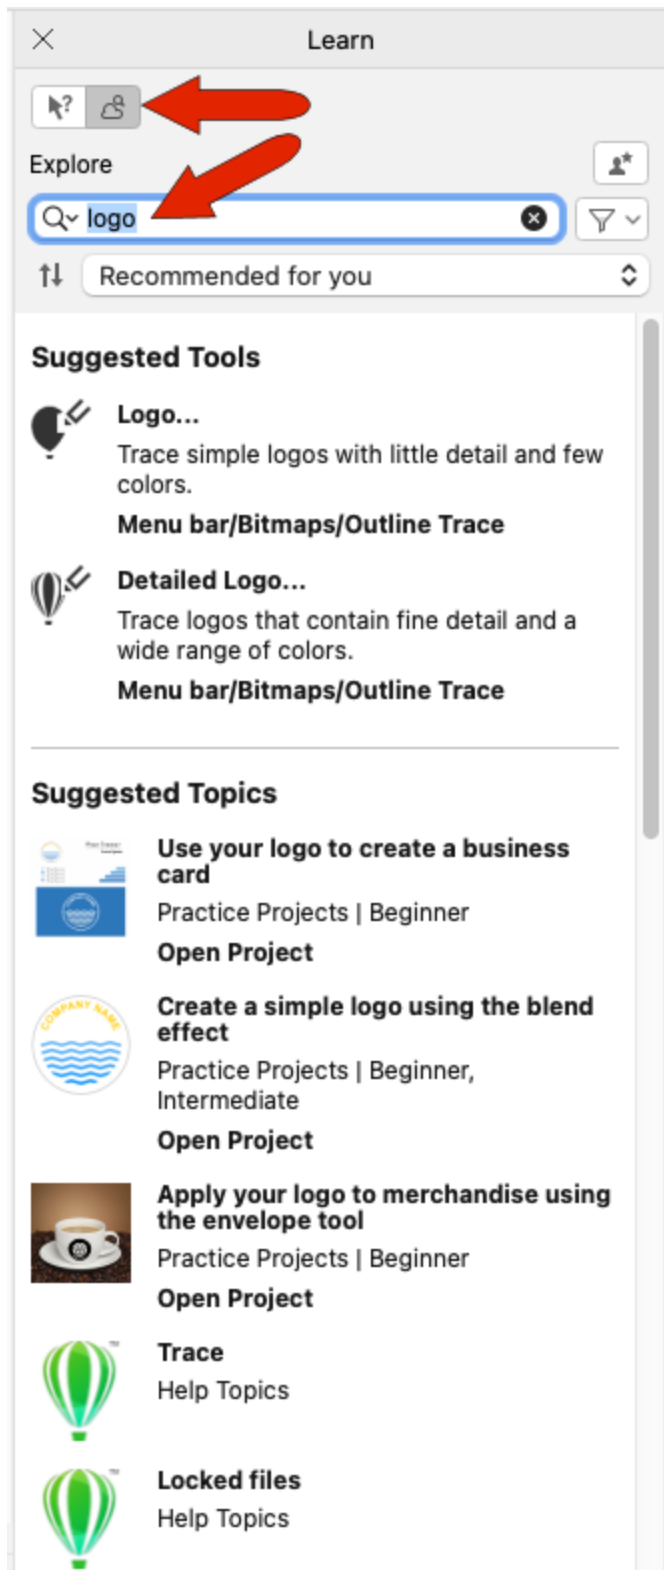

We'll link this information to your profile, in order to curate learning content just for you.

On the last page of the survey, you'll see one or more practice projects selected for you, based on your responses.

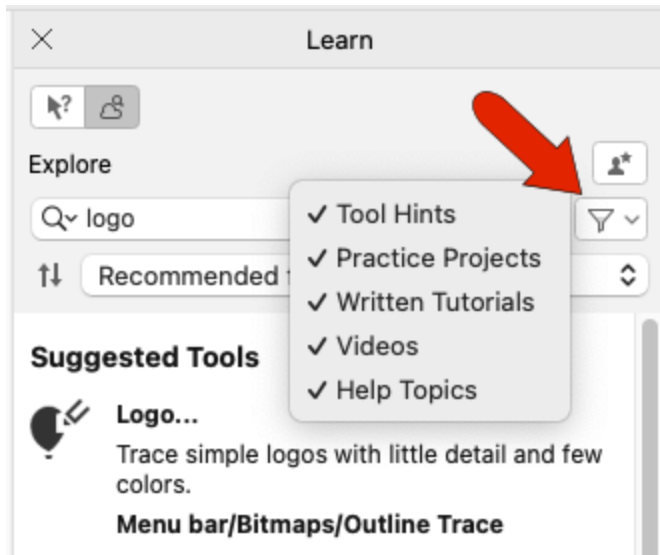

If CorelDRAW or PHOTO-PAINT is already open, the **Learn** inspector can be opened from the **Window > Inspectors** menu, or by clicking the three-dot icon below the set of open inspectors.

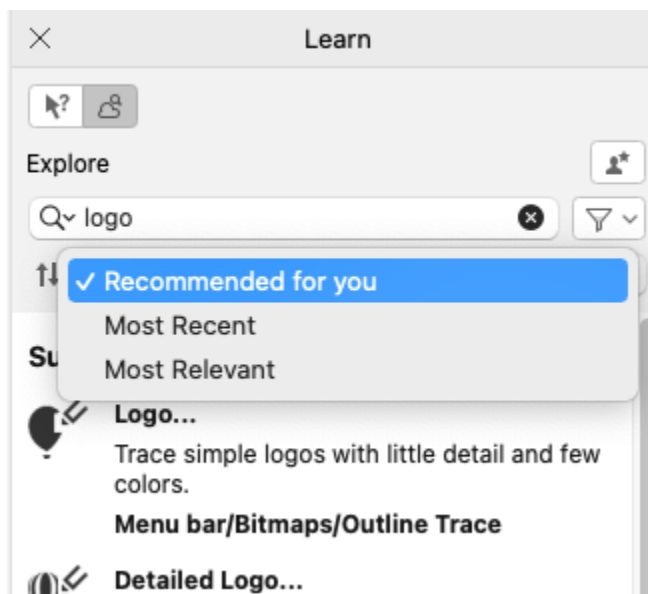

On the **Explore** tab, available to subscribers only, you can enter a search term, such as "logo," to find learning content on that topic.

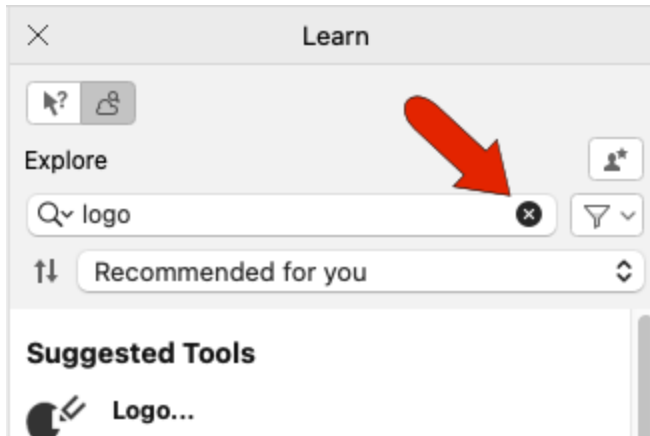

By default, the filter options are set to show all content, including tool hints, practice projects, written tutorials, videos, and help topics.

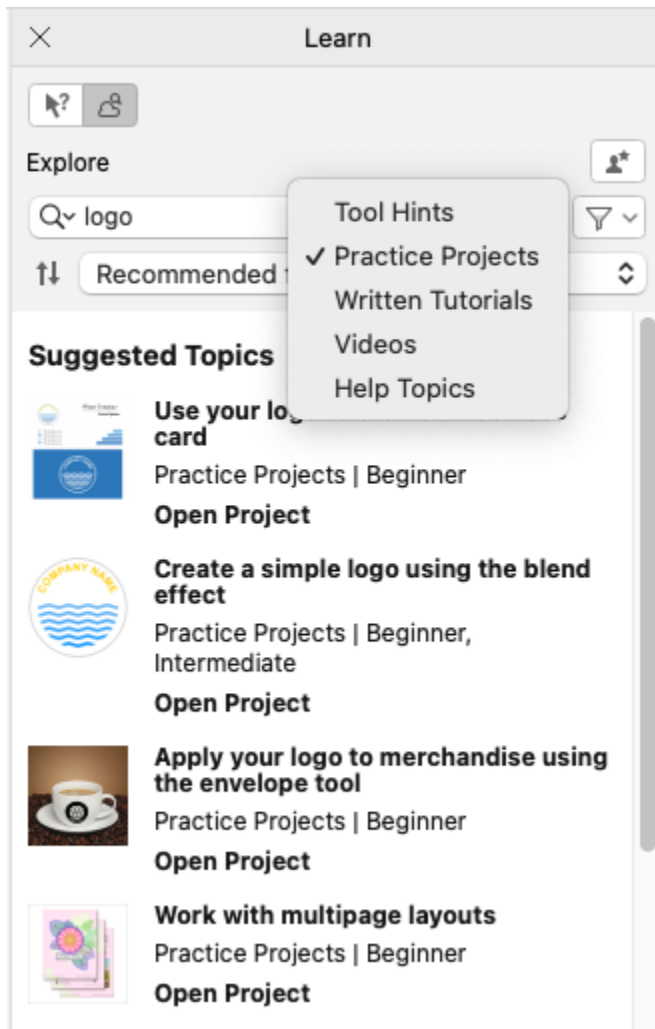

The sorting option **Recommended for You** lists content first that suits your profile. Switching to **Most Recent** shows recently added content first, and the **Most Relevant** option sorts the list to show the content most relevant to your search term.

Clicking the **X** icon clears the search field.

In this example, content results are filtered to show only practice projects, and this list includes all practice projects for all types of users.

The **Recommended For You** filter is handy for seeing practice projects that fit your profile, and switching to **Most Recent** may display new practice projects you haven't seen before.

Clicking a practice project opens the file directly in CorelDRAW or PHOTO-PAINT, where you'll find detailed steps for replicating the practice design.

Design an illustrative advertisement

In this project, you'll learn how to use illustrations and text in an advertisement.

1. In the toolbox, click the **Curve** tools flyout, and click the **Pen** tool.
2. Draw leaf objects using the outlines provided as guides.
3. In the toolbox, click the **Pick** tool, then hold down the **Shift** key, and click each leaf object.
4. On the property bar, click the **Group** objects button.
5. In the toolbox, click the **Eyedropper** tools flyout, and click the **Attributes Eyedropper** tool.
6. Click a color or gradient from the provided swatches. Then click the objects you created to apply a color or gradient.
7. Using the **Pick** tool, position the leaf objects on the poster.
8. Hold down the **Shift** key, and click the leaf objects with the **Pick** tool, then click **Object** menu > **PowerClip** > **Place Inside Frame**, and click the object on the page.
9. In the toolbox, click the **Text** tool, hover over the black curve, and when the cursor displays a curve, type to add text.
10. In the toolbox, click the **Shape** tool, click the black curve, then choose **None** from the **Outline width** list box on the property bar.
11. Using the **Text** tool, add supporting text to the design, such as company name and website. On the property bar, you can modify text properties, such as font type, size, and color.

See page 2 for the completed design.

Note: Some command names, locations, and icons differ between the Windows and Mac versions of the product. For example, on macOS, dockers are called **inspector**.

Let's say you've already been using CorelDRAW or PHOTO PAINT without having filled out the profile survey. Or perhaps you did respond but now want to change or update your answers. Clicking the **Personalize results** icon re-opens the survey, which will list any previous answers.

- Use your logo to create a business card
- Practice Projects | Beginner

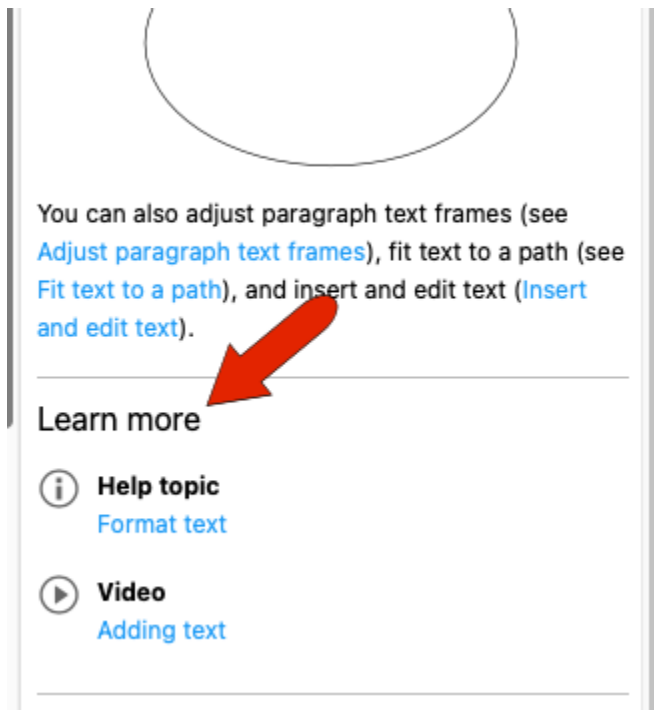

A red arrow points to the 'Personalize results' icon (a person with a plus sign) in the Explore section.

Updating your responses updates your profile, which enables us to show you the learning content most relevant to you. And clicking a practice project from this window also opens it directly.

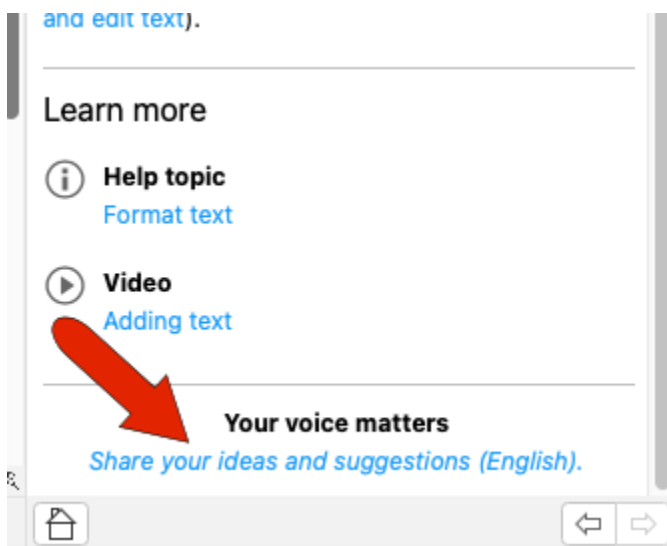

The other tab in the **Learn** inspector is **Hints**, available to all users, which provides learning content and tips for the currently active tool.

The **Learn More** section has links to help topics and other relevant content.

From this tab you can also access the **Ideas Portal**, where you can help contribute to CorelDRAW Graphic Suite's design and development.

You can submit your own ideas and suggestions, and vote on ideas and suggestions made by others.

- 1 Add drawing scale to toolbar on CoreDraw for Mac**
VOTE I was able to use it in CoreDraw on PC. Doesn't work the same for Mac computers
Guest 3 days ago in 0
- 2 Add search in preferences dialog**
VOTE CoreDraw has a lot of different preferences grouped into several tabs. Finding a particular preference or a toggle sometimes takes a lot of time. Having a search bar in preferences would help finding a preference more quickly.

- 2 Objects Docker - Collapse Page View by Default**
VOTE When I open a CoreDraw file with many pages, it takes me a while to scroll all the way the bottom to access the Master Page. So I have to, each and every time, collapse the pages to save time. This also makes it easy for me to switch back and for...
